

Epic 1: Data Collection

Story 1: Download the Credit Card Fraud Detection Dataset and Prepare it for Analysis

Step 1: Access the Kaggle website (<https://www.kaggle.com>) using a web browser.

Step 2: Sign in to Kaggle or create a new account if required.

Step 3: Search for **Credit Card Fraud Detection** and open the dataset by Machine Learning Group – ULB.

Step 4: Read the dataset description to understand its purpose and features.

Step 5: Click the **Download** button to download the dataset ZIP file.

Step 6: Extract the ZIP file to obtain **creditcard.csv**.

Step 7: Create a project folder and store the CSV file inside the Dataset folder.

Step 8: Verify that the dataset contains 284,807 records, 31 columns, and the target column **Class**.

Step 9: Import the dataset into Python using Pandas.

Step 10: Inspect the dataset by checking rows, columns, data types, and missing values.

Outcome

The dataset is successfully downloaded, extracted, verified, and ready for preprocessing and machine learning.
